Input

"A Mouse in the House" is a very classic cartoon by Tom & Jerry, faithful to their tradition but with jokes of its own. It is hysterical, hilarious, very entertaining and quite amusing. Artwork is of good quality either. This short isn't just about Tom trying to catch Jerry. Butch lives in the same house and he's trying to catch the mouse too, because «the's only going to be one cat in this house in the morning - - and that's the cat that catches the mouse».

If you ask me, there are lots of funny gags in this cartoon. The funniest for me are, for example, when Mammy Two Shoes sees the two lazy cats

Prompt

You are a sentiment analysis assistant. Your job is to read movie reviews and classify their sentiment as either 'positive' or 'negative'. Only respond in this exact JSON format: {"sentiment": "positive"} or {"sentiment": "negative"}. Do not provide any explanation or

Output

{"sentiment": "positive"}

Wrapper Prompt

You are a powerful language model. You are given a user request consisting of a system prompt and a user message. Your task is as follows:

1. Identify the type of input the user is providing: one of ["text", "image", "table", "other"]
2. Infer what task you are expected to perform, choosing from:

Wrapped Output
